Limbo turns this concept slightly. Instead of reacting in real-time to a climbing up multiplier, the gamer **sets a target multiplier** before the round even starts. The game then generates a random multiplier. If the generated multiplier is equal to or higher than the target, the gamer wins. If it falls short, the bet is lost.

The name "Limbo" mean the suspense of the mechanic: gamers are continuously evaluating how high they can push their luck (or their target multiplier) without falling flat.

4. **Hit "Bet" or "Roll":** The system produces a random number.
5. **Gather or Lose:** If the result fulfills or goes beyond the target, the payment is computed quickly (Bet Amount £ \ times £ Target Multiplier).

Example Scenario

Think of a gamer wagers **£ 10** and sets their target multiplier to **5.00 x**.

- **Situation A:** The game produces an outcome of **6.25 x**. Since 6.25 x is higher than 5.00 x, the gamer wins **£ 50** (£ 10 £ \ times £ 5.00 x, minus the initial stake, or a net profit of £ 40).
- **Situation B:** The game generates a result of **2.10 x**. Since 2.10 x is lower than 5.00 x, the gamer loses the £ 10 wager.
