- **The Reaction to Wins:** When players win a round, they frequently have a cognitive bias that informs them to toss the winning shape again, or they transition to the shape that the opponent may expect them to prevent.
- **The Illusion of Control:** Players typically attempt to overcomplicate their decision-making, resulting in foreseeable series or loops.

- **Pattern Recognition (Shot-Tracking):** In longer gambling sessions, keep mental or physical notes of your opponent's sequences. Do they favor Paper after a tie? Do they stubbornly toss Scissors 3 times in a row? Capitalize on these routines.
