How the Game Mechanics Work

The game counts on a Provably Fair algorithm, ensuring that the placement of mines is randomized and proven. When a round starts, the server creates a grid-- usually 5x5-- and distributes a predetermined number of mines throughout it. The player then communicates with the grid in the following sequence:

1. **Setting the Parameters:** Before the first click, the gamer selects their bet amount and the variety of mines they wish to include in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The player clicks a tile. If it is a multiplier, the balance increases, and the gamer can pick to "Cash Out" or continue.
3. **The Risk:** If a mine is triggered, the round ends instantly, and the stake is surrendered.
4. **The Multiplier Growth:** The more mines picked at the start, the higher the multiplier for each successful tile opened.

Comprehending Risk vs. Reward

The table listed below illustrates how different mine counts impact the prospective growth of a gamer's preliminary stake.
