The objective is simple: "squander" before the multiplier undoubtedly crashes. If the gamer cashes out in time, they win their stake increased by that number. If it crashes before they squander, they lose whatever.

How the Crash Mechanics Work

Phase Description

Gamer Action	The Betting Window
A timer (usually 5-- 10 seconds) counts down before a round begins. Gamers put their wanted wager amount and can optionally set an "auto-cashout."	The Ascent
The multiplier starts at 1.00 x and climbs up in real-time. Players see the multiplier rise, waiting for the optimal minute to click "Cash Out."	The Crash
The round ends abruptly at a random multiplier (varying anywhere from 1.00 x to infinity theoretically, though typically capped). If the gamer hasn't squandered yet, their bet is surrendered.
