Generally, a progressive jackpot was tied to a single game (e.g., *Mega Moolah*) or hosted solely within one casino brand. If a gamer positioned a bet on that video game, a small portion of it approached the pot.

2. **The Network Transmission:** Instead of remaining within Casino A's local database, the contribution is sent safely through API to the aggregator's central server.
3. **The Pool Accumulation:** The aggregator combines this contribution with contributions from gamers at Casino B, Casino C, and on completely different slot titles altogether.
4. **The Real-Time Display:** The present jackpot total is upgraded in real-time throughout every participating platform and video game interface.
