What Are CS: GO Case Sites?

CS: GO case websites are web-based websites that replicate the in-game case-opening mechanic using genuine cash or site-specific credits. Unlike the default Valve-issued cases, these platforms frequently host a wider catalogue of skins, including terminated, special, and "concealed" items that are no longer offered through the official game. Gamers can acquire "cases" (virtual loot boxes), open them, and receive skins that are then deposited into their Steam inventory or a site-owned wallet for additional usage.

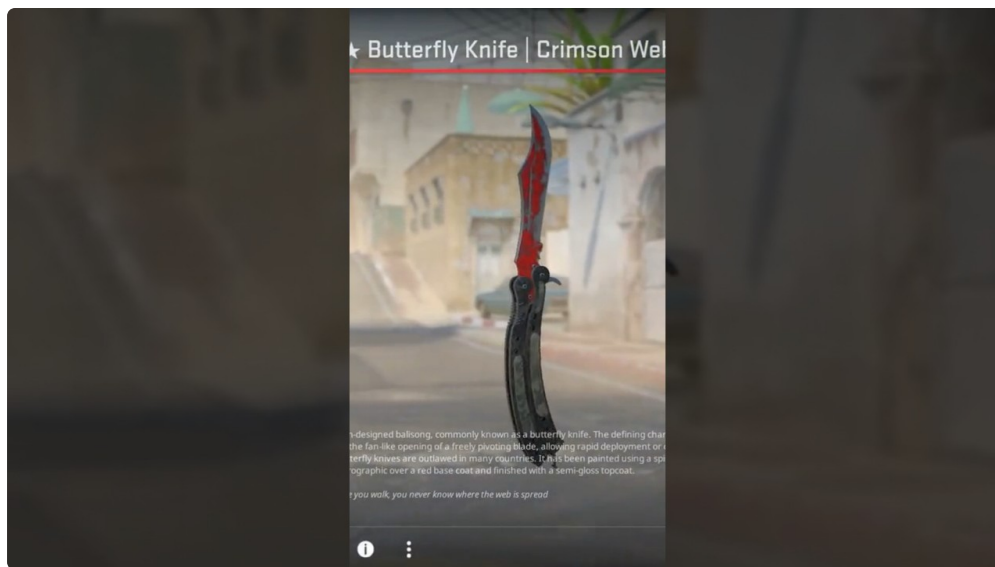

The 3 most common formats are:

1. **Case Opening**-- The timeless "spin-the-wheel" experience. Users buy a case, open it, and receive a random skin based upon a programmed drop-rate table.
2. **Case Battles**-- Two or more gamers open the exact same set of cases at the same time; the highest-value skin wins the pot.
3. **Update/ Coinflip/ Roulette**-- Games where gamers risk their skins or virtual credits for a chance to increase their stock worth.

How Do They Work?

The majority of case websites operate on a "pay-to-open" model. Gamers deposit funds through credit card, PayPal, cryptocurrency, or Steam wallet balance. The website shows a virtual case containing a set of items, each with a published likelihood (e.g., 0.5% for a "Knife-- Fade"). When the case is opened, a random number generator (RNG) determines which item is granted. The result is server-side, so the player can not influence the result.

After opening, the acquired skin can be:

- **Transferred to Steam**-- The website sends out the product as a trade deal.
- **Stored in the Site Wallet**-- The skin remains on the platform for further gameplay, upgrades, or withdrawals.
- **Cost Site Credit**-- Some websites enable instantaneous cash-out at a reduced market rate.
