As the ball falls, it bounces arbitrarily off a series of pins before eventually landing in among numerous slot multipliers at the bottom. The multiplier in the slot where the ball lands figures out the payment.

When a ball strikes a peg, it theoretically has a 50% chance of bouncing left and a 50% opportunity of bouncing right. Due to the fact that of this regular circulation:

- The ball is statistically more than likely to land in the center slots, which is why those slots generally offer the most affordable payouts (typically less than the initial bet).
- The ball is statistically least most likely to strike the extreme outer edges, which is why those slots boast the game's highest multipliers.
