Mathematically, if both players choose totally at random, Rock Paper Scissors is a game of pure possibility with a 33.3% win, 33.3% loss, and 33.3% tie rate for each option. However, human beings are essentially flawed random-number generators. This mental aspect is specifically what expert gamers exploit in high-stakes competitions, such as those traditionally hosted by the USA Rock Paper Scissors League.

When people play under pressure, they show foreseeable behavioral patterns:

- **The Beginner's Bias:** Novice players overwhelmingly throw **Rock** on the very first turn because the hand is clenched into a fist, which feels powerful and aggressive.
- **The Retaliation Rule:** If a player loses a round, they rarely toss the exact same sign again right away. Instead, they normally change to the sign that *would have beaten* the challenger's previous winning toss.
- **Pattern Triggers:** If a gamer tosses Rock two times in a row, they practically never ever throw it a 3rd time, fearing predictability.
