We likewise search for various sorts of staining, such as tetracycline staining that originates from particular antibiotics. Yes, teeth bleaching sets containing active ingredients like peroxide can effectively whiten your teeth by permeating the enamel to get rid of spots.

# HOW TEETH WHITENING WORKS

## THE SCIENCE BEHIND A BRIGHTER SMILE

### PEROXIDE PENETRATION

Active ingredients like hydrogen and carbamide peroxide penetrate tooth enamel and dentin.

### OXIDATION & STAIN BREAKDOWN

Peroxides initiate oxidation, targeting chromogens (stain molecules) and breaking them down.

### BRIGHTER, WHITER SMILE

Broken-down chromogens become lighter and more transparent, revealing a whiter tooth color without structural damage.
