As the ball falls, it arbitrarily deflects left or right whenever it strikes a peg. Gravity and chaos theory take control of up until the ball finally settles into one of the multiplier slots at the bottom. If it lands in a high-multiplier slot, the gamer wins a numerous of their initial bet. If it lands in a low-multiplier slot, they might win less than their stake-- or lose it completely.

- **The Center:** There are various paths for the ball to end up in the middle slots. Consequently, the ball lands in the center the large majority of the time. This is why the center slots generally feature payments listed below 1x (e.g., 0.2 x, 0.5 x, or 0.9 x).
- **The Edges:** There are really couple of specific pathways that lead a ball all the way to the far-left or reactionary corners. Due to the fact that these results are statistically unusual, online gambling establishments connect massive multipliers (like 500x, 1,000 x, or even 10,000 x) to those external slots.
