The longer a gamer continues to click tiles without striking a mine, the greater the multiplier climbs up-- however the statistical likelihood of hitting a mine increases with every successful pick.

- **Grid Size:** Some versions allow you to change the grid (e.g., 2x3, 3x6, 5x5). Smaller grids have fewer mines however lower benefits; larger grids provide huge multipliers but significantly higher risk.
- **Mine Count:** Players can often choose how lots of mines are hidden on the grid. A higher mine count significantly increases the multiplier for each gem found however makes the game considerably more volatile.
