A CS: GO case is a locked container that can be opened utilizing a **key** purchased through Steam or the in-game shop. When opened, the case yields a single random product-- a skin for a firearm, a sticker, a glove, or an unique "Contraband" item. The rarity and float worth (wear) of the item are figured out by a configured probability table.

Cases first appeared in 2013 and have considering that multiplied into dozens of unique versions, each tied to a particular collection or operation. Their real-world worth is driven by supply and need on the Steam Community Market, where rare skins can fetch hundreds or even thousands of dollars.

2. How Case Opening Works

The RNG is seeded by Valve's servers, ensuring that the result is unforeseeable and not manipulable by the customer.
