

9 VAGINAL CHANGES DURING PREGNANCY

VAGINAL DISCHARGE

After conception, there is an increase in the amount of discharge which further helps to prevent infections.

ITCHING

Itching in down parts is common during pregnancy. The cause of this increased itching is due to changes in vaginal pH and an increase in discharge.

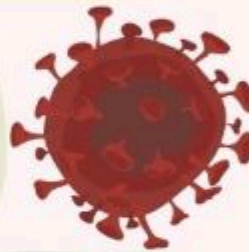

PH LEVELS

During pregnancy, there is increased blood flow in the uterus and vagina. This increased blood flow will alter the pH of these organs.

PRONE TO INFECTIONS

Vagina becomes more vulnerable to infections during pregnancy like fungal infections etc.

BLUE SHADE

The vagina changes into a blue color during pregnancy. Due to increased blood flow in lower body parts, it turns blue which is known as Chadwick's sign.

VARICOSE VEINS

Due to an increase in weight of belly and pressure, it's common to develop purple and bulging blood vessels of legs but this can occur in private parts too like the vagina.

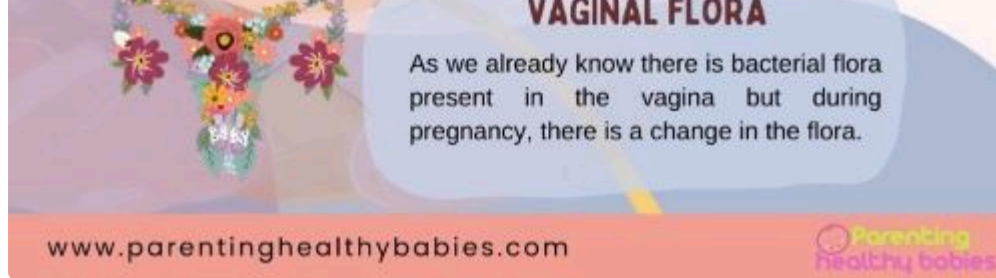

FEELS LIKE LUNGED

When you feel that your vagina is being stabbed you consult to doctor but there is no need to worry because it is just a side effect of pregnancy known as "lightning crotch".

GROWTH OF HAIR

The pubic hair growth is faster due to the increase in the level of oestrogen in the blood and gets clogged in pores due to excessive sweating.
